

1.

$$\frac{120 + 80}{25 - 5} + 9 = \frac{200}{20} = 10 + 9 = 19$$

2.

$$\frac{250 + 150}{\frac{50}{2}} + 18 \times 2 = \frac{400}{25} = 16 + 36 = 52$$

3.

$$36 \times 4 + \frac{120}{6} - 45 = 144 + 20 - 45 = 119$$

4.

$$\frac{(45 + 55) \times 2}{8 + 2} + 12 = \frac{200}{10} = 20 + 12 = 32$$

5.

$$\frac{1,200}{50 - 30} + 45 \times 4 - \frac{300}{10} = 60 + 180 - 30 = 210$$

6.

$$\frac{500 + 250}{\frac{75}{5} + \frac{20}{4}} = \frac{750}{20} = 37.5$$
